

1990 1

Statistical aspects of the coal economy in 1989 - Provisional results -

1989 was characterized by a relaxed energy supply situation in the Community, with just French electricity producers having to make up for losses of nuclear energy (due to climatic conditions and plant failure) by increasing their use of other energy sources. Bottlenecks in both domestic supplies and export commitments were overcome with the help, inter alia of electricity produced from domestic and other Community coal.

The Community's output of coal during the year, 208.1 Mio t as against 214.6 Mio t in 1988 (-3.1 %), was achieved with a workforce of 210 100, 22 400 fewer than in 1988 (232 500). There was a general rise in output per underground man-hour.

Colliery stock trends varied. Some Member States catered for their requirements by increasing imports from outside the Community, which according to provisional calculations were some 4 Mio t up on the previous year (around 100 Mio t in 1989 against approximately 96 Mio t in 1988). Others compensated for declining production by making use of national reserves (e.g. Federal Republic of Germany). France met the rise in demand by significantly increasing imports (+30.7 %) and reducing colliery stocks (25.9 %).

Although the production of hard coke in most of the Member countries suffered only a small set-back, the production in the United Kingdom fell from 8.6 Mio t in 1988 to 7.8 Mio t in 1989. At approximately 51.7 Mio t, the total for the Community is more than 2 % down on the previous year.
