

EUROPEAN ECONOMY

COMMISSION OF THE EUROPEAN COMMUNITIES
DIRECTORATE-GENERAL FOR ECONOMIC AND FINANCIAL AFFAIRS

Supplement B
Business and consumer
survey results
No 3 – March 1991

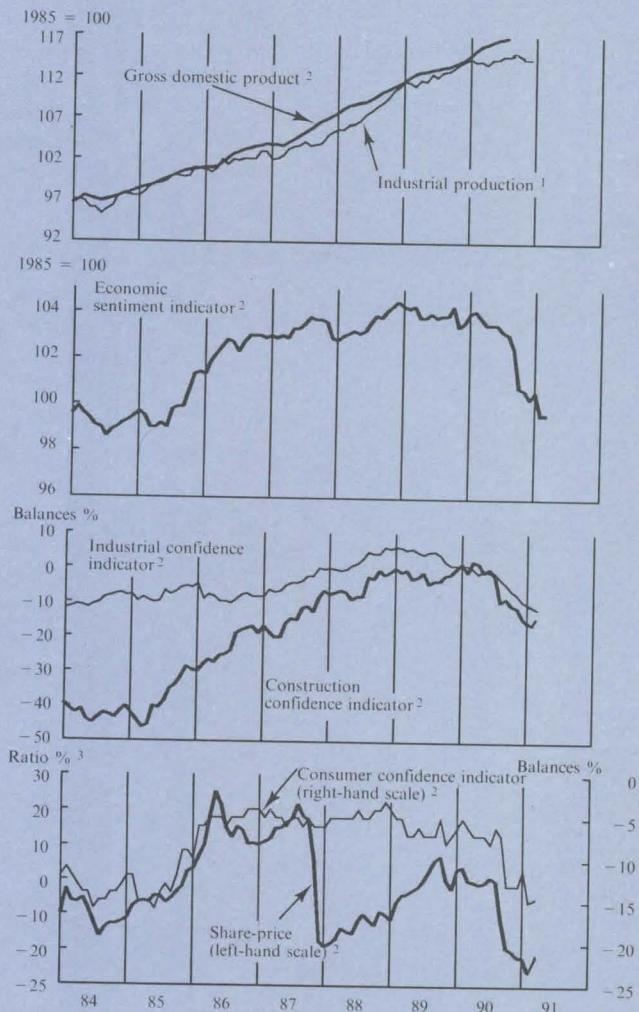

*In this number:
Survey results
on investment and retail trade*

THE MAIN POINTS IN BRIEF

- Economic activity in the European Community is still relatively weak. In February, the business climate was heavily influenced by the hostilities in the Gulf. The intensification of the conflict clearly made a marked impression on industrialists' opinions.
- Nevertheless, in February the Community's leading economic indicator remained stable in comparison with January. The decisive factors, in addition to the stability of *consumer confidence*, were the further improvement in the business climate in the *construction industry* and above all the marked rise in *share prices* towards the end of February. However, the results of the *industrial survey* show that manufacturers are in a definitely more pessimistic mood.
- In view of the diminution in capacity utilization and the overcast industrial climate, manufacturers have revised downward their 1991 plans for investing in extra capacity.

GRAPH 2: Structure of industrial investment
Community 1990/1991

Economic growth in Europe remains subdued. — Economic activity in the European Community is still weak. In February, the business climate was heavily influenced by the hostilities in the Gulf. The intensification of the conflict clearly made a marked impression on industrialists' opinions. The survey was conducted only a few days after military action had begun. By contrast, consumers, who were questioned almost two weeks later, did not change the assessments they had made shortly before the outbreak of the Gulf war. This can be seen from the business survey results available to February 1991.

In February, the Community's leading economic indicator showed no change on the month before. — In February, the Community's economic sentiment indicator remained stable in comparison with January. In this connection, the important factors, in addition to the stability of *consumer confidence*, were the further improvement in the business climate in the *construction industry* and above all the marked rise in *share prices* towards the end of February. Clearly investors on the equity markets reacted most rapidly to positive news from the Gulf region. The ending of the Gulf war is likely to have a favourable influence on the economic climate in March. The further rise in share prices in March, but also the recent appreciation of the United States dollar could be signs that confidence in the economic situation is continuing to improve. Nevertheless, it remains to be seen whether this more favourable environment will also be of benefit to the *industrial climate*. At any rate, the February results indicate that manufacturers are in a markedly more pessimistic mood. In addition to a marked decline in industrial output expected by companies for the coming months, their main concern is that export orders are insufficient.

Industrialists have trimmed their 1991 plans to invest in extra capacity. — Even though economic activity has been more subdued recently, the expansion of demand in Europe is still determined by domestic demand. The driving force continues to be the investment demand of companies, even though their readiness to invest was considerably dented by the Gulf crisis. The results of the October/November 1990 investment survey give a particularly clear picture of the cautious assessments of companies. The recent easing of tension in the Gulf and the accompanying improvement in the economic environment could cause firms to revise their investment plans upwards again. The results of the March/April 1991 survey will give a more accurate idea of this.

The October/November investment survey gives an interesting view of the structure of investment. According to the survey (see Table 1), in 1991 - with investment increasing by almost the same percentage as in the previous year - European industrial firms clearly intend to invest less in extra capacity. Whereas in 1990 the latter's share of overall investment still stood at 36%, in 1991 industrial firms are planning to devote only 30% of their investment expenditure to extending capacity. The addition of rationalization investment provides a pointer to the increase in productivity to be expected in industry. In view of the diminution in capacity utilization and the overcast industrial climate, it is clear that not so much store is set by such productivity increases in 1991 as in previous years. On the other hand, investment in extra capacity should again increase more sharply in the Federal Republic and in the Netherlands and Ireland in 1991; in Germany this is probably connected with the establishment of new production capacity in the former GDR.

15 March 1991

(a) The indicator is an average of the responses (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

(b) These are the extreme (high and low) values of the balances of the different questions, reached in the course of 1972-1975 and 1979-1983, respectively.

Note: (s.a.) = seasonally adjusted. : = not available. () = estimated.

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator represents the arithmetic average of results for five questions, namely the two on the financial situation of the household, the two on the general economic situation, and that concerning major purchases at present.

(c) If monthly data are not available, the EUR-averages incorporate the most recent available results.

1 The climate of consumer confidence is measured by an indicator based on five questions in the consumer survey. These are the questions relating to the general economic situation, the household financial situation and to major purchases of durable goods.

2 Quarterly data: percentage change on corresponding quarter of preceding year.

3 Quarterly data: monthly from May 1986 onwards.

4 Percentage changes on corresponding period of preceding year.

5 See table 5 for data and notes.

6 Seasonally adjusted.

7 EUR 10 up to May 1986; EUR 12 from June 1986 onwards.

Questions of European Community business and consumer surveys

Manufacturing industry

Monthly:

estimate of production trend in recent months: up, unchanged, down?
 order-books: above normal, normal, below normal?
 export order-books: above normal, normal, below normal?
 stocks of finished products: above normal, normal, below normal?
 production expectations in the months ahead: up, unchanged, down?
 selling-price expectations in the months ahead: up, unchanged, down?

Quarterly (January, April, July and October):

employment expectations for the months ahead: up, unchanged, down?
 limits to production: none, insufficient demand, shortage of labour, lack of equipment, others?
 production capacity: more than sufficient, sufficient, not sufficient?
 duration of assured production: in months?
 new orders in the recent past: up, unchanged, down?
 export volume expectations for the months ahead: up, unchanged, down?
 capacity utilization: in %?
 stocks of raw material: high, normal, low?

All industries

Half-yearly (undertaken in March/April and October/November):

investment trends and prospects: yearly percentage change of investment expenditure in current money values.

Building industry

Monthly (except for Denmark, Greece, France, Ireland and the United Kingdom, where the survey is carried out quarterly):

current production compared with the preceding month: up, unchanged, down?
 factors holding up production: none, lack of demand, bad weather, shortage of manpower, shortage of material and/or equipment, others?
 order-books or production schedules: above normal, normal, below normal?
 employment expectations in the months ahead: up, unchanged, down?
 price expectations in the months ahead: up, unchanged, down?

Quarterly (January, April, July and October)

duration of assured production: in months?

Retail trade sector

Monthly (France and Italy bi-monthly):

we consider our present business (sales) position to be: good, satisfactory (normal for the season), bad;
 we consider our present stock to be: too small, adequate (normal for the season), too large; we expect that our orders placed on suppliers during the next (three) months, excluding purely seasonal variations, will be: up, unchanged, down;
 our business trend over the next six months, excluding purely seasonal variations, will improve, remain unchanged, deteriorate.

Quarterly:

In the next (three) months, and compared with today, the number of persons we employ will: increase, remain unchanged, decline.

Consumer survey

Monthly:

Financial situation of your household now compared to 12 months ago: a lot better, a little better, the same, a little worse, a lot worse, don't know.
 Financial situation of your household, prospects over the next 12 months: a lot better, a little better, the same, a little worse, a lot worse, don't know.
 General economic situation in the country now compared to 12 months ago: a lot better, a little better, the same, a little worse, a lot worse, don't know.
 General economic situation in the country, prospects over the next 12 months: a lot better, a little better, the same, a little worse, a lot worse, don't know.
 Price level now compared to 12 months ago: much higher, moderately higher, a little higher, about the same, lower, don't know.
 Price trend over the next 12 months: more rapid increase, same increase, slower increase, stability, slight decrease, don't know.
 Unemployment level in the country over the next 12 months will: increase sharply, increase slightly, remain the same, fall slightly, don't know.
 Major purchases (furniture, washing machine, TV, etc.) at present: yes, right time; neither right nor wrong time; should postpone; don't know.
 Major purchases next 12 months, compared to last 12 months: much more, a little more, the same, a little less, much less, don't know.
 Savings at present, a reasonable time to save: yes, certainly; yes, perhaps; probably not; certainly not; don't know.
 Savings by you or your household over the next 12 months: yes, certainly; yes, perhaps; probably not; certainly not; don't know.
 Financial situation of households at present - financial assets accumulation: borrowing, drawing on savings, just making ends meet, saving a little, saving a substantial amount, don't know.

Economic sentiment indicator

The economic sentiment indicator is a composite measure in which the industrial confidence indicator and the consumer confidence indicator are given equal weight, while the construction confidence indicator and the share-price index are attributed half the weight of each of the other two. The share-price index is included in the composite indicator in ratio-to-trend form, in order to separate short-term or cyclical variations from long-term increases in the value of shares. The long-term trend of the series is calculated using the NBER-Bry-Boschan growth cycle programme. For a fuller description of the economic sentiment indicator and its components, see the technical note in the November 1982 issue of this Supplement.

Industrial confidence indicator

The industrial confidence indicator is the arithmetic average of the answers (balances) to the questions on production expectations, order-books and stocks (the latter with inverted sign).

Construction confidence indicator

The construction confidence indicator is the arithmetic average of the answers (balances) to the questions on order-books and employment expectations.

Consumer confidence indicator

The consumer confidence indicator is the arithmetic average of the answers (balances) to the four questions on the financial situation of households and general economic situation (past and future) together with that on the advisability of making major purchases. For a more detailed description of the consumer confidence indicator see technical note in the December 1982 issue of Supplement C.
